I am a Front-end developer looking for a full-time position in a progressive company.
I work with HTML5, CSS3, SCSS, JS, React and keep learning new skills. Development, practice and work for the result are important for me. I learn new things with great perseverance and desire. I'm also very motivated to work at this job.

PROJECT EXPERIENCE

Filmoteka, Link
[HTML, SCSS, JS, Parcel, Git, REST API, Firebase] Role: Scrum Master
Web application where you can register, find out information about a variety of movies, watch trailers, create your own library of watched films and films that you want to watch.
My main technical task was to create modal windows that contain information from The Movie Database API about a particular movie. I tried several methods and chose the best one.

Marvel information portal, Link
[React, SCSS, Webpack, Babel, Git, Bootstrap]
Marvel Information Portal is a website that I have developed for Marvel fans. The character bio section is one of the key features of the website. Users can access detailed information about their favorite Marvel characters. One of the unique features of the Marvel Information Portal is the Random Characters section.

WebStudio, Link
[HTML, CSS, SCSS, Git]
WebStudio is a landing website that I have developed to showcase the services provided by a web development company called "WebStudio".
